

Name: Kevin Vuong

Student number: 10730141

- Given the fact that there are 366(!) data elements available, I chose to make the width 50 pixels * 366 pixels. This way each bar has atleast 50 pixels width of own space.
- For the y-axis, I chose to divide the temperature by 10, because KNMI registers the temperature in it's real temperature multiplied by 10.
- As tooltip, I chose to let the tooltip follow the mouse for interactivity.
